Hydra-Pellets

Using Hydra-Titan technologies, **Hydra-Pellets** is a non-foaming pelletized soil surfactant with 100% active ingredient designed for spot treatment of hydrophobic areas and “hot spots” on greens. Developed for applications in standard hand-watering guns, Hydra-Pellets is safe to apply on greens, will not crumble during use and will treat two greens per pellet.

Hydra-Pellets are the only soil surfactant pellet that is comprised of three unique polymers. Two block polymers provide unsurpassed penetration and uniform hydration. A third reverse block polymer provides water retention when necessary.

SAR Elicitor

Benefits:

- Precise ratio of multi-functional polymers
 - 45% penetration
 - 45% uniform moisture and re-wetting
 - 10% water retention.
- Non-foaming, non-melting, no crumbling
- 2 greens per pellet

Product Label Information

Net weight: 1/2 pound (226 grams) per pellet.
Contents: 12 pellets

Guaranteed Analysis:

Blend of alkoxyated polyols and polyhydroxyethyl alkoxy
alkylene oxide99%

Application Recommendation

Monthly applications:

Directions for Use: Insert one pellet, with or without container, into the applicator jar and apply during hand watering and/or syringing once every month or as needed. Follow up throughout the month with pellets as needed for localized dry spots and turf watering. The flow of water through applicator should follow the molded arrow.
